                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      on :
      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seq length: 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                        The present invention describes a raffinose synthase, having an activity of forming raffinose from sucrose and galactinol. The raffinose synthase gene can be used for expression in a plant for the production of raffinose. The raffinose synthase can give raffinose from sucrose and galactinol efficiently. The present sequence represents a raffinose contract from sucrose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 JP11123080-A.

                                                                                       The present invention relates to a mutant protein of raffinose synthas in which at least one aromatic amino acid present at the position of about 1-7 amino acids from the N-terminus is deleted or replaced. The mutant protein can be used for reducing the raffinose oligosaccharide content in a plant body. The present protein from soybean, was used in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a raffinose synthase, having an activity of forming raffinose from sucrose and galactinol. The raffinose synthase gene can be used for expression in a plant for the production of raffinose. The raffinose synthase can give raffinose from sucrose and galactinol efficiently. The present sequence represents raffinose synthase from cucumber.
                                                                                                                                                      Disclosure; Page 18-20; 30pp; Japanese.

The raffinose synthetase is capable of producing raffinose by combining a D-galactosyl group through an alpha (1-6) bond with a hydroxyl group attached to the carbon atom at position 6 of a D-glucose residue in a sucrose molecule. The DNA can be used to modify metabolism of a host organism by introducing into the host organism or its cell so that the content of the raffinose family oligosaccharides in the host organism or cell is changed. Raffinose oligosaccharides are useful as food additives with beneficial effects on the gastrointestinal flora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecule encoding plant raffinose synthetase capable of producing raffinose, used as food additives with beneficial effects on gastrointestinal flora

                                                                                                      This sequence represents the broad bean raffinose synthetase of the invention. The raffinose synthetase is capable of producing raffinose by combining a D-galactosyl group through an alpha (1-6) bond with a hydroxyl group attached to the carbon atom at position 6 of a D-glucose residue in a sucrose molecule. The DNA can be used to modify metabolism of a host organism by introducing into the host organism or its cell so that the content of the raffinose family oligosaccharides in the host organism or cell is changed. Raffinose oligosaccharides are useful as food additives with beneficial effects on the gastrointestinal flora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the production of transgenic plants which express genes with desired

The sequence is isolated from plant material of broad beans. The protein forms raffinose by complexing alpha(1 to 6) - D-galactosyl hydroxyl group of the 6C of D-glucose residue in sucrose molecules

Raffinose synthase is involved in the biosynthesis of raffinose and higher homologues in the raffinose saccharide family from sucrose. The present sequence is useful for reducing the raffinose saccharide content of soybean seeds which improves the nutritional quality of the soy protein products derived from them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids and encoded proteins involved in the biosynthesis of raffinose, useful for producing soybean seeds with a reduced raffinose content and therefore improved nutritional quality -
          New sense and antisense genes, useful for altering the level of raffinose in food plants .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            haming leaf cDNA by PCR. Probes or primers generated from plant raffinose synthase genes (see AAZ20207-10) may be used to obtain other raffinose synthase genes by labeled detection or amplification (claimed). These genes may be used to control the levels of raffinose produced in plants. Antisense genes can be used to knock out existing gene activity, and sense genes to increase the level of gene activity. The resulting transgenic plants may be used as a food source to alter the growing conditions for gut enterobacteria, providing general health advantages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents sugarbeet raffinose synthase, a protein that can bind a D-galactosyl group through an alpha(1-6) bond to the hydroxy group attached to the carbon atom at the 6-position of the D-glucose residue in a sucrose molecule to form raffinose. cDNA (see AAZ20208) encoding the enzyme was isolated from sugarbeet cv. haming leaf cDNA by PCR. Raffinose synthase is involved in the biosynthesis of raffinose and higher homologues in the raffinose saccharide family from sucrose. The present sequence is useful for reducing the raffinose saccharide content of soybean seeds which improves the nutritional quality of the soy protein products derived from them.

A; Description: receptor mediating effects of fibroblast growth factor
A; Note: expressed in normal lung; expressed in some carcinomas
C; Superfamily: basic fibroblast growth factor receptor 1; immunoglobulin homology; prote
C; Keywords: ATP; autophosphorylation; duplication; glycoprotein; growth factor receptor;
F;11-72/Domain: immunoglobulin homology <IM2>
F;218-238/Domain: immunoglobulin homology <IM2>
F;218-238/Domain: immunoglobulin homology <IM2>
F;239-650/Domain: intracellular *status predicted <IMT>
F;331-398/Domain: protein kinase homology <KINN>
F;331-399/Domain: protein kinase ATP-binding motif
F;310-1329/Region: protein kinase ATP-binding motif
F;104,136,157,168/Binding site: carbohydrate (Asn) (covalent) *status predicted
F;465,478/Binding site: magnesium (Asn, Asp) *status predicted
F;465,478/Binding site: magnesium (Asn, Asp) *status predicted
F;491/Binding site: phosphate (Tyr) (covalent) (by autophosphorylation) *status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene 120, 291-295, 1992

IT EARLYZES THE PRODUCTION OF HC-TOXIN; A CYCLIC TETRAPEPTIDE. HTS CONSISTS OF HTS-1 AND HTS-2 WHICH ARE PART OF THE SAME POLYPEPTIDE. HTS-1 ACTIVATES L-PROLINE, THIOESTERIFIES L-PRO, AND EPIMERIZES IT TO D-PRO; HTS-2 ACTIVATES AND THIOESTERIFIES L-ALA AND EPIMERIZES L-ALA TO D-ALA AND EPIMERIZES L-ALA TO D-ALA COVALENTLY BOUND PHOSPHOPANTETHEINES. COPTAINS 4 COVALENTLY BOUND PHOSPHOPANTETHEINES. PATHWAY: NON-RIBOSOMAL BIOSYNTHESIS OF HC-TOXIN.

Proc. Natl. Acad. Sci. U.S.A. 91:499-503(1994).

SMALL HYDROPHILIC MOLECULES; IT ADDETS AN OPEN CONFORMATION AT LOW SMALL HYDROPHILIC MOLECULES; IT ADDETS AN OPEN CONFORMATION AT POTENTIALS OR ZERO MEMBRANE POTENTIAL AND A CLOSED CONFORMATION AT POTENTIALS ABOVE 30-40 MV. THE OPEN STATE HAS A WEAK ANION SELECTIVITY ABOVE 30-40 MV. THE OPEN STATE HAS A WEAK ANION SELECTIVES.

WHEREAS THE CLOSED STATE IS CATION-SELECTIVE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: FORMS A CHANNEL THROUGH THE MITOCHONDRIAL OUTER MEMBRANE AND ALSO THE PLASMA MEMBRANE. THE CHANNEL ALLOWS DIFFUSION OF AND ALSO THE PLASMA MEMBRANE. THE CHANNEL ALLOWS DIFFUSION OF SMALL HYDROPHILIC MOLECULES; IT ADOPTS AN OPEN CONFORMATION AT LOW SMALL HYDROPHILIC MOLECULES; IT ADOPTS AN OPEN CONFORMATION AT POTENTIALS OR ZERO MEMBRANE POTENTIAL AND A CLOSED CONFORMATION AT POTENTIALS ABOVE 30-40 MV. THE OPEN STATE HAS A WEAK ANION SELECTIVITY ABOVE 30-40 MV. THE OPEN STATE IS CATION-SELECTIVE (BY SIMILARITY).

WHEREAS THE CLOSED STATE IS CATION-SELECTIVE (BY SIMILARITY).

WHEREAS THE CLOSED STATE IS CATION-SELECTIVE (BY SIMILARITY).

MEMBRANE (BY SIMILARITY).

DOMAIN: CONSISTS MAINLY OF MEMBRANE-SPANNING SIDED BETA-SHEETS.

DOMAIN: CONSISTS MAINLY OF MEMBRANE-SPANNING SIDED BETA-SHEETS.

SIMILARITY: BELONGS TO THE EUKARYOTIC MITOCHONDRIAL PORIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VSVGCFVGFDASEPDSR 18
